*The IR Rejection measurement is based on an average transmission form 780-2500m

The performance data shown is based on film applied to 1/8" clear, monolithic, annealed glass. Technical values reported are typical properties and should not be used as a specification. The user alone is aware of the specific conditions in which the product is to be applied, therefore, it is their responsibility to determine the suitability of the product for that intended application. If you need more comprehensive information or guidance, contact maxpro or your local Maxpro window film dealer.
